

TOTAL MODULAR: THE VIDEO INTERCOM SYSTEM

See people in front of the door, talk to them, open the door. Easy to install, modularly adaptable to any building - and the individual wishes of the users.

Discreetly beautiful: blind covering of wall break-outs

When installing the ModuVis video module or other modules, is not the entire wall opening covered? Should a placeholder be placed in advance in order to attach another module later? Then set the appropriate installation frame to cover the entire area. And the empty module as a discreet blind cover for the still unoccupied part of the frame - in the same colour as the video module.

Totally modular, extensively expandable

A clear advantage: depending on the number of flats or living areas and local requirements, modules are simply added to the system, e.g. info module with name plate, bell button module or numeric keypad for keyless access via PIN code. And if a module is planned but not yet set during the initial installation, the projecting or unoccupied wall opening is simply covered with the empty module.

Technologies

- Empty module (blind cover) for ModuVis door intercom system
- Suitable for surface-mounted or flush-mounted frames
