

LOCK CASING SECURELY FASTENED

Porous substrate? Insufficient strength? The ABUS screw-on plate holds.

If you are struggling with insufficiently solid surfaces when mounting your lock casing, the ASP17 screw-on plate is the solution. A variety of fastening options offer you a secure hold. For strong mounting of your lock casing, the plate is mounted underneath using the enclosed fixing material. Optionally, the use of threaded rods and injection mortar is suitable. The ASP17 can be used with the PR1400, PR1500, PR2600, PR2700 and PR2800 bars.

Technologies

- Fastening with enclosed fastening material or optionally with threaded rods and injection mortar
- Multiple fastening options for a secure hold
- Mounting takes place under the actual locking boxes of the deadbolt

Operation and use

- Screw-on plate for secure fastening of the lock cases on porous or insufficiently firm substrates
- Suitable for PR1400, PR1500, PR2600 - PR2800
