SAFETY THROUGH VISIBILITY

Every year, cyclists die from accidents or are injured simply because they are overlooked by other road users.

Especially in poor visibility conditions such as at night, at dusk, in heavy rain or fog, it is therefore extremely important to attract attention as a cyclist. The Urban-I 2.0 signal makes cycling particularly safe in poor visibility and darkness. Its large main reflectors and several additional reflectors, together with the integrated LED tail light, ensure high visibility of the cyclist - during the day and especially at night.

Technologies

- In-Mold for a durable connection with the outer shell with shock-absorbing helmet material (EPS)
- Zoom Evo Adult – fine adjustment system with a non-slip adjusting wheel
- Large, highly mounted and integrated LED tail light with 180° visibility
- Fidlock magnetic strap buckle
- Size adjustment by means of a half ring made from particularly hard-wearing and slightly malleable plastic for optimal stability and form fitting
- Excellent ventilation with 12 air inlets and 5 air outlets
- Foamed-in fly net and removable visor
- Removable and washable padding with maximum wearing comfort
- Soft straps that are simple to fit thanks to practical strap adjusters
- Passive safety due to large main reflector at the rear and several additional reflectors with particularly high reflection effect
