

SIMPLE. ACCESS. ORGANISATION.  
WITH THE DIGITAL TECTIQ LOCKING SYSTEM.

Minimise maintenance work for the TECTIQ locking system and distribute updates efficiently using the smartphone as a programming and transfer device.

Data exchange between smartphone and door component

The Admin app can be used to perform a wide range of maintenance tasks in the TECTIQ system. In the start version, the range of functions includes wireless installation of firmware updates and updating of the date and time on the door component, e.g. after battery replacement.

Future functionality in the full version

The range of functions of the Admin app is constantly being expanded through regular updates. In the full version, it serves as a bidirectional transfer device between the TECTIQ Access Manager software and the door components. Changes and logs are automatically fed back into the software via a highly secure peer-to-peer connection. It also displays upcoming commissioning and maintenance tasks in a job list and supports intelligent planning and efficient implementation of maintenance rounds.

Simple. Efficient. Inexpensive.

Download the Admin app on your smartphone now and test it! Everything on your smartphone - without an additional transfer device. And benefit from more and more smart functions with the next updates.

## Technologies

- Admin app (iOS/Android) for time-saving maintenance of TECTIQ door components via Bluetooth Low Energy (BLE)
- Maintenance of door components also possible without a permanent internet connection
- Fast, wireless firmware updates for TECTIQ door components via BLE

- Secure authentication at the door component by presenting a parameter card of the system before starting data exchange
- Simple synchronisation of date and time in the app after battery replacement
- Secure login in the Admin app via the ABUS Online account
- Available soon: quick start-up and maintenance of the system by personalising components, transferring logs and events, transferring the blacklist and much more in the app
- Available soon: real-time data exchange between TECTIQ Access Manager and Admin app conveniently via mobile data (GSM, 4G, 5G) or locally via Wi-Fi

## Technical data - TECTIQ Admin App

Availability	iOS (App Store) & Android (Google Play Store)
Compatible with	TECTIQ cylinder, TECTIQ fitting, TECTIQ wall reader
Functional principle	Programming tool for TECTIQ locking systems
Functions	Synchronisation of date/time, FW update of door components
Initial installation	Download the Admin app from the App Store (iOS) or Google Play Store (Android)
Internet connection	Updates can be carried out without an active internet connection
Item abbreviation	TEC-APP-ADMIN
Registration	Login via the ABUS Online account in the app
Security features	Data transfer only possible with ABUS Online account and parameter card of the system, locking of taught-in parameter cards in the ABUS TECTIQ Access Manager, readout-protected data storage within the smartphone
Supported languages	German, English, Dutch, Swedish, Danish, Italian, French, Norwegian, Finnish
Supported operating systems	At least iOS 15.x or Android 11
Synchronisation	Synchronisation of the app with the ABUS Cloud: via Wi-Fi or mobile radio (GSM/LTE), communication with the TECTIQ door component: via Bluetooth Low Energy 2.4 GHz
Version	1.0.0
required smartphone memory	At least 120 MB
