

RELIABLE RESISTANCE

This mounting set enables the secure assembly of window locks.

Sometimes a window does not offer sufficient possibility to mount an additional security lock. With this mounting set you can solve this problem. The set is mounted in the frame with binding mortar. It consists of plastic sieve and threaded bolt with screw. After the mortar has hardened, the maximum load of this strong anchor is possible.

Technologies

- Consists of a metal sieve and a fixing bolt with screw
- Mortar (available at the shops) is injected in the PVC profile through the sieve; the bolt is then inserted and the ABUS window lock can be fixed with a screw
- Increases the strength of the lock providing maximum protection against forceful attacks

Operation and use

- Reliable pulling resistance, for ABUS locks according to DIN, VdS and SKG
- For PVC or aluminium frame profiles
- Each product needs one fixing set

Technical data - IM100
