KEY STORAGE PRODUCTS 2023

CONVENIENT STORAGE OF KEYS AND KEY CARDS

ABUS KeyGarage™ offers secure storage of keys and code cards

If you need to make your keys accessible to other people an easy and secure way of doing so is to use a key storage box. ABUS offers several products for storing keys or access cards securely. Its an ideal solution when for example you need to provide out of hours access for people or when you need to let emergency services, service people, health care providers, holiday guests in to a building. Other applications include storage of keys for construction equipment on a building site, storage of keys for rental vehicles and storage of access cards for shared office spaces.

ABUS KeyGarage™

ABUS KeyGarage™ offers an easy, convenient and secure solution for storing keys or access cards. They are available as a fixed, wall-mounted solution or as a portable solution. Both variants are made with a strong, solid metal housing and strong access door from pressure-cast zinc. A plastic cover protects the dial mechanism against all kinds of weather. Access to the storage space is via an access code that can be individually set. Once the code has been set, all that is required is providing the access code to those who should be authorised access. Providing the access code can for example easily be done via text messages or e-mail.

Some variants are available with LED illuminated number dials which is useful in low light or dark conditions. The portable variants have a removable shackle attached so that the storage box can be attached to for example gates, fences, railings, door handles.

The access code be changed quickly and easily to allow for changes in who should have access to the stored keys.

KeyGarage™ 787BIG

ABUS Keysafe

Same as ABUS KeyGarage™, the KeySafe is also used for storing keys securely. Constructed from a stainless steel tube these products are intended to be installed in to the fabric of the building – for example in to the external brick wall.

The KeySafe has a removable insert with integrated drill protection that takes a standard cylinder and access to the storage space is by using a key.

Because of its design, construction and installation this is a highly secure storage solution for keys when you need to provide out of hours access for emergency services, repair and maintenance contractors or health care providers.
