9001 IOTECT & ABUS CMAP BEYOND SECURITY

Smart organization of keyless security: Whether in the rental sector, logistics industry or construction sector – the ABUS cMAP platform and the 9001 IoTect locking modules offer completely new possibilities in the field of security and theft protection.

9001 IOTECT AND SMARTX™ TECHNOLOGY

ON-SITE SECURITY, CONTROL FROM EVERYWHERE

More than a lock – with the 9001 IoTect you no longer have to worry about the whereabouts of keys. The lock is opened with the smartphone via Bluetooth – with the usual ABUS security. Because encrypted communication via the ABUS SmartX™ Bluetooth® standard developed by ABUS ensures maximum security.

Tip: By activating the keyless function, you can simply leave your smartphone in your pocket – the mobile app will then automatically connect with the lock.

9001 IOTECT IN USE

-  Bluetooth:
Secure keyless opening

-  GSM: Remote access, Real-time documentation and Notification

-  Motion sensor: 100 db alarm

-  GPS: Tracking

DIFFERENT FORM FACTORS

ABUS cMAP – ALL USERS AND LOCKS AT A GLANCE

Our cloud-based security platform **ABUS cMAP** maps all lock and user data and enables the assignment of authorizations, via app or desktop application. In addition to the local Bluetooth connection to the smartphone, the lock is also

connected to ABUS cMAP via the Internet using the integrated SIM card.

This allows you to send digital keys and grant access – permanently or for a limited time. All processes and interactions of users and locks are documented in ABUS cMAP.

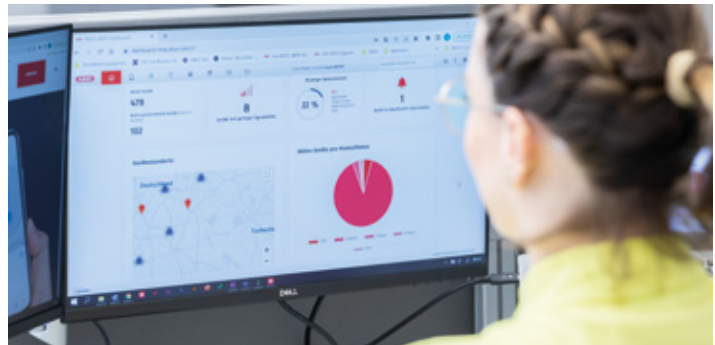

Unauthorized access is reported by the alarm function, both audibly on site and via push notification in the app.

For complex requirements due to an increased number of users and locks to manage, it is recommended to use the web-based dashboard. This also offers centralized remote opening of locks, as well as comprehensive reporting and analysis of your processes.

MOBILE APP

WEB-BASED DASHBOARD

| | Mobile App | Web-based Dashboard |
|--------------------|------------|---------------------|
| Management | Mobile | Central |
| Access Control | ✓ | ✓ |
| Activity Display | ✓ | ✓ |
| Documentation | ✓ | ✓ |
| Reporting/Analyses | ✗ | ✓ |
| Central Opening | ✗ | ✓ |
